Conditionals

Conditions

Note that [[is actually a command/program that returns either 0 (true) or 1 (false). Any program that obeys the same logic (like all base utils, such as grep(1) or ping(1)) can be used as condition, see examples.

array).

```
set -o noclobber
set -o errexit  # Used to exit upon error, avoiding cascading errors
set -o pipefail  # Unveils hidden failures
set -o nounset  # Exposes unset variables
```

Glob options

```
set -o nullglob  # Non-matching globs are removed ('*.foo' => '')
set -o failglob  # Non-matching globs throw errors
set -o nocaseglob  # Case insensitive globs
set -o globdots  # Wildcards match dotfiles ("*.sh" => ".foo.sh")
set -o globstar  # Allow ** for recursive matches ('lib/**/*.rb' => 'lib/*
